

Insert sequence length and convert one-line sequences to fasta format

Purpose: to insert sequence length of one-line sequences and remove sequences with < 100 bp and convert to fasta format

Source code: insert_sequence_length.cpp

Example input file: text_out.txt

Example output file: text_insert.txt

Instructions:

1) Compile source code to app called “insert” using the line command:

```
g++ insert_sequence_length.cpp -o insert
```

2) Run the “insert” program by invoking the following line command:

```
./insert text_out.txt text_insert.txt
```
